6.0	<i>Team Declaration</i>	<i>3</i>

1.0 Introduction

Briefly introduce the specific problem you've chosen, highlighting its drawbacks in existing applications. Explain how current methods might fall short, and how your project aims to handle the current limitations. Mention your motivation for selecting this topic and perhaps due to personal interest or its real-world significance. Emphasizing the relevance of your project to an specific domain.

2.0 Objectives of the Project

The project title should directly reflect the main objective you aim to achieve. These objectives should be clear, and concise and encapsulate the overall purpose of your project. To achieve this main objective, you'll need to establish specific, measurable goals. These specific objectives act as the building blocks for your project and should be directly tied to the main objective.

Clearly define the main objective and specific objective in your project

3.0 Expected Deliverables

Briefly explain about expected outcomes of your projects.

4.0 Project Team Composition

The Digital Image Processing project can be carried out as a team. A given team can have a maximum of five students. It's their own responsibility to manage all the team members skills, knowledge, dedication and commitment equally to achieve the project objectives and final goal. Working in a team with members of different skills and attitudes and tackling disputes to reach the final goal is one of the essential abilities aimed from the project. Explain about how the team collaboration is planned.

5.0 Project Description

5.1.1 Study on Previous Projects

Mentioned the procedure about how your team referred the previous global studies and how those have analyzed and what are knowledges and ideas extracted from previous studies and

5.1.2 Project Area & Title

Students should investigate and identify specific requirements relevant to the domain. How your team is planning to apply previously studied knowledge on your project and Comprehensive explanation on Project Area and Title of your planned project *(The project topic should be clearly explained for acceptance. The submitted topic must be accepted by the lecturer, otherwise those teams will not be eligible for the proposal submission).*

5.1.3 Methodology & Technology Stack

The methodology section should be comprised of a detailed explanation of how you are achieving your project objectives. Here, you have to outline the specific image processing techniques and algorithms you plan to utilize. Highlight how they address the identified problem. Describe the software tools you'll be using for implementation. Specify the functionalities offered by these tools and their suitability for your chosen algorithms. If your project involves acquiring data, outline the data collection process. This could include details on the type of images you'll be gathering, the source (e.g., self-captured, online images) or any specific considerations for image acquisition. what is the image processing steps and techniques that your team is planning to cover, Better if you could explain with theories.

Students should mention coding procedure and ethical considerations, new technologies, development environments, debugging and issue fixing capabilities, managing source codes in addition to software quality assurance.

5.1.4 Timeline & Milestone

The proposed project plan has been divided into a set of phases based on time so that teams can be guided and evaluated with an effective timeline to monitor each team's progress throughout the project.

6.0 Team Declaration

We declare that the work presented in this project [Project Title], is entirely our own original work. We have not copied, replicated any existing solutions or highly utilized AI tools to generate content and have strived to develop a unique approach to address the chosen problem.

This project represents a collaborative effort undertaken by all team members [List all team member names]. Each member actively participated and contributed their expertise to the various stages of the project, from concept development to final implementation.
